The following documents are referred to in this communication:

D2 : US 2002/006764 A1 (DIEHL JOACHIM ET AL) 17 January 2002 (2002-01-17)  
D3 : GB-A-1 208 943 (TEXTRON INC) 14 October 1970 (1970-10-14).

**1 INDEPENDENT CLAIM 1**

- 1.1 The present application does not meet the criteria of Article 33(1) PCT, because the subject-matter of claim 1 is not new in the sense of Article 33(2) PCT.  
Document D1 discloses (the references in parenthesis applying to this document):

A jig (500,430,400) suitable for mounting one or more lenses on a two axes coordinate movement bed of a CNC machine suitable for machining one or more lenses (cf. Fig. 2, column 4 line 63 to column 5 line 13, column 7 line 46 to column 8 line 20) said jig comprising a carriage (430) having one or more lens holders (410) suitable for holding one or more lenses (100) said carriage (430) being rotatable about a first axis (1431) so as to be able to present one or more lenses to a tool of the machine, said lens being constrained to restrict rotation of the lens about an axis normal to the concave or convex surface of the one or more lenses (100).

Annotation: Since the object claimed is the jig as such, the features of the machine and the features of the lens holders are not restricting for the jig claimed. This applies equally to the dependent claims.

- 1.2 Furthermore the present application does not meet the criteria of Article 33(1) PCT, because the subject-matter of claim 1 is not new in the sense of Article 33(2) PCT.  
Document D2 discloses all the limiting technical features (see also the annotation under section 1.1).

**2 DEPENDENT CLAIMS 2-7, 9, 10**

Dependent claims 2-7, 9, 10 do not contain any features which, in combination with the features of any claim to which they refer, meet the requirements of the

PCT in respect of novelty (claims 1-5, 7, 9, 10) and inventive step (claim 6) in view of the documents D1 (claims 1, 2, 5, 7, 9), D2 (claims 1, 3, 4, 10) and D3 (claim 6).

**3 DEPENDENT CLAIM 8**

The combination of the features of dependent claim 8 is neither known from, nor rendered obvious by, the available prior art since the prior art lens jigs do not employ a second axis about which the base plate of the jig itself is tiltable in order to accelerate lens machining.
